

PIONEER

NATIONALLY RECOGNIZED DOCTOR HAS HELPED THOUSANDS REVERSE
NEUROPATHY WITHOUT SURGERY OR MEDICATIONS

Imagine waking up every day suffering, depressed, and hopeless. All you could ever want or hope for is just a second of relief! This is the life of someone who suffers from Neuropathy. Neuropathy is the new epidemic in our lives today. What is Neuropathy? Neuropathy is DAMAGE TO YOUR NERVES. It is a condition that causes your nerves to stop working. Nerves in your body perform **two** major functions. **The first is movement.** For our hands to grab something, a nerve tells a muscle what to do. For us to walk, a nerve tells a specific muscle to contract. **The second function of a nerve is feeling.** When you step on something, receptors fire and send information through your nerve to the brain that tells you what it is. When the feeling portion of the nerve is damaged, it shows in **two** ways. The first is numbness and the second is an amplified response.

People with Neuropathy can expect to have:

- Numbness
- Tingling
- Burning
- Chronic Pain
- Balance Issues
- Too Much Feeling

Who is Dr. Thai?

Dr. Thai started his career as a chiropractor. Today his specialty is any condition that involves nerves. He is the **pioneer of a process that has helped thousands nationwide reverse neuropathy.** Dr. Thai figured out how to use medical technologies such as specialized lasers and other technologies that allow the body to speed up its natural repair process. His process **decreases inflammation, increase the uptake of nutrients into cells, and allows the body to repair and regenerate damaged nerves and tissues.** His process is comprehensive. Patients are given a nutritional program they follow to help establish an anti-inflammatory state in their body. Patients of Dr. Thai **always lose weight.** It is an important part of his process. The only way you can get real results is to **deal with all of the problems that are making the neuropathy worse.** If you ask Dr. Thai what does he do now, he says he is a functional medicine doctor. His passion is helping people who have not found answers.

What are the DANGERS of having NEUROPATHY?

Let me tell you about Betty. Betty is in her 70's. She is a vibrant, active person. She loves life. She loves doing things. Most of all she loves spending time with her grandkids. She ended up with **Neuropathy as a result of diabetes.** If you have diabetes, it is almost a guarantee you will end up with neuropathy. The diabetes causes your nerves to be stripped of its outer covering which exposes the nerve to the outside environment. This causes more and more damage to the nerve's ability to work. Betty lost feeling in her feet. Her legs were getting **weaker and weaker.** Walking just a few steps felt **impossible.** She went to her doctor only to hear that there was nothing that they could do, that they had **NO ANSWER** for her problem. The best her doctors could do was give her drugs to temporarily help with the symptoms. Betty was **angry, saddened, and depressed.** She saw her life being taken away by this disease!

What are the DANGERS of having NEUROPATHY? -Continued-

Betty saw Dr. Bao Thai on ABC's **Good Morning Texas**. He had a patient on that had her exact problems, **but now her neuropathy was reversed**. In her mind Betty thought, "How could this be?" Her primary care doctor, neurologist, and pain management doctor had all told her it cannot be reversed. So how is this patient on TV that has the **exact same problems** and had also been told by the doctor that nothing could be done, **now NO LONGER have neuropathy?** She was intrigued and finally had some hope. If someone else was able to beat neuropathy, why not her?

Betty called immediately and made an appointment to see Dr. Thai. Sitting in his waiting room she saw the **office filled with happy faces**. She talked to some of the patients in the room and heard fantastic stories of people who had neuropathy from diabetes, chemotherapy, as a result of back or neck surgery, and from medications that caused the problems to people who had no idea where their neuropathy came from. Every single patient she talked to had nothing but praise for Dr. Thai and his staff. She was amazed that everyone in there was from a different city in the Metroplex. People were driving from Dallas, Ft. Worth, and all in between. **They all were finally getting better!** Their feeling was coming back. Their strength was improving. Their balance was getting stronger and stronger. **She knew she was in the right place!**

During Betty's consultation with Dr. Thai, he spent time explaining to her why she had neuropathy in a way none of her doctors had done before. She felt his enthusiasm and love he had for the work he was doing. **At the end, she knew exactly why she had neuropathy, why conventional treatments continually fail, what would happen if she did not do something different, and why Medicare and insurance companies were not the answer to her problems.** Everything finally made sense. She had clarity and direction on what she had to do to reverse her neuropathy. She was sick and tired of Medicare and insurance companies paying for treatment that did nothing for her. At the end of the consultation she made up her mind that this is what she wanted to do. She talked to Dr. Thai's care team regarding the financial aspect of her plan. Everything made sense! She started treatment with great joy and excitement, and her **NEUROPATHY IS NOW GONE!** She can feel her feet again. The pain is gone. Her balance is strong. She can walk again with confidence. Feeling the gas pedal in her car is real again! All her prayers had been answered. She was asked if there was one piece of advice she would give to someone suffering from neuropathy what it would be. She said, "**Do not wait until it is too late. Go see Dr. Thai and let him help you with your problems. Your doctors cannot do anything for you. Dr. Thai can!**"

MORE INFORMATION TO CONSIDER...

- Dr. Thai has been on national TV.
- He is a frequent guest on “Good Morning Texas” in Dallas as well as “Great Day Houston.”
- He has offices in Orlando, Houston, Corinth and soon Dallas.
- Dr. Thai has spoken at Harvard.
- His office has won numerous awards for the work they do.
- He is a best-selling international author.

Walking into Dr. Thai’s office is unlike any other. Patients are happy and hopeful. There is an energy that exists there that is lost in many other doctors’ offices. **“Finding a way to help people is my mission. I love challenges.”** This is Dr. Thai’s motto. Patients deserve a better quality of life. **Insurances companies, the pharmaceutical industry, and Medicare have handicapped doctors from being doctors.** The people that suffer are the patients.

Conditions Dr. Thai has had success with:

- Diabetic neuropathy
- Chemo driven neuropathy
- Nerve damage from back or neck surgery
- Chronic pain
- RSD
- Circulation driven neuropathy
- Idiopathic neuropathy
- Plantar fasciitis
- Spinal stenosis
- Disc herniations
- Balance issues
- Chronic knee pain
- Chronic hip pain
- Post surgical pain
- Occipital and trigeminal neuralgia
- Sports injuries
- Drop foot
- Many more

FREQUENTLY ASKED QUESTIONS:

Dr. Thai, how does your process work? The body has the natural ability to heal. It just forgets what it wants to do or there are other things acting as obstacles. Take an athlete that has an injury. We are able to get that injury healed in 75 percent of the time it would normally take with conventional treatment. Take a nerve that is damaged. Once you get the body in the repair mode it can take as little as a few weeks to see some change. Our bodies are magnificent. We were created to repair problems. If you give your body what it needs, the possibilities are endless!

Dr. Thai, what is the biggest mistake patients make? It’s always interesting to me that patients look at their health and think because insurance companies pay for treatment, that is the answer. They look at what it costs, not what can it do for you. Insurance companies have created a mentality that if something is not covered by their insurance company, then it is not worth doing. That thinking is why more and more patients have neuropathy. Think about this— insurance companies and Medicare are willing to **pay for medications which have absolutely no nerve repairing properties at all.** All they do is act like a BAND-AID and cover the symptoms. Once you stop taking the meds, the problems come back. Worse yet, once your body builds a tolerance to the medications, you feel even worse. If you talk to anyone diagnosed with neuropathy, it is the same story over and over. You have to take your health in your own hands. It’s not how much you spend, but what gets you lasting results!
